Summary

Cybersecurity Engineering graduate with a strong interest in offensive security, systems, and how things break under pressure. Comfortable working close to the OS, networks, and real infrastructure. I prefer understanding how things actually work rather than memorizing tools. Looking for hands-on roles where learning, experimentation, and problem-solving matter.

Education

Bachelor's Degree in Cybersecurity Engineering
Graduate

Technical Skills

- Networking fundamentals (TCP/IP, DNS, HTTP, basic routing)

- Linux systems, terminals, and scripting

- Vulnerability analysis and basic exploitation concepts

- Web application security fundamentals

- Familiar with penetration testing workflows and tooling

Projects & Practical Experience

- Worked on security-focused labs and hands-on environments related to networking, Linux, and web security

- Practiced identifying misconfigurations and common vulnerabilities in controlled environments

- Experience analyzing scan results and understanding attack surfaces rather than blindly running tools

Strengths

- Curious by default I dig until I understand

- Comfortable learning independently and breaking things safely

- Calm under pressure and patient with complex problems

- Not afraid of low-level details

Languages

- Arabic (Native)

- English (Professional working proficiency)
